

QB Scribe Operating Procedure

How to operate QB Scribe Resonator System

1. Fill the Water Jug with clean drinking water. The water level should not exceed the "shoulder" of the bottle.

It is best to clean the Jug, the bottle cap. Wash them with a mild detergent and dry them with a clean cloth.

2. Remove the Seal at the bottom of the Activator unit.

3. If operating on Battery:

- a) Open the battery cover by rotating it anti - clockwise
- b) Insert 2 AA batteries according to the indicated polarity.
- c) Align the "LOCK symbol" on the battery cover with the line marker on rear of the Main Activator Unit and close the battery cover by rotating it clockwise.
- d) Press the one-touch button of the main activator unit and hold for 3 to 4 seconds until you hear a beep sound.
- e) An orange light will illuminate the one-touch button, indicating that the Quantum Biotech Resonator System unit has not been used before and it is ready to be used for the first time.
- f) Place the main activator unit on top of the Water Jug.
- g) Press and release the one-touch button to begin the activation. The button turns to blue blinking light indicating resonating process starts.
- h) After about 30 minutes, the light will turn green. This means that the water is now fully resonated and ready for consumption.
- i) To Shutdown the QB Scribe Resonator System, press and hold for 3 to 4 seconds. The button will turns to no light indicating the system is shutdown

NB: If the QB Scribe Resonator System is run on batteries, the system will automatically shut down 5 minutes after the resonating process is completed.

The QB Scribe Resonator System can be switched off by pressing and holding the one-touch button for 3 seconds.

To restart or using the QB Scribe second time onward - Press and hold the one-touch button on the main activator unit for 3 to 4 seconds until the red light appeared. A red light appears indicating that the QB Scribe Resonator System is on stand-by mode for the resonating process to begin.

To start the resonating process, press and release the one-touch button. A blue light will begin to blink from the button, indicating that the water is being resonated.

After about 30 minutes, the light will turn green. This means that the water is now fully resonated and ready for consumption.

4. If operating on AC power

- a) Slide the desired plug into the power adapter. (2 Flat Pins or 2 Round Pins)
- b) "PUSH" and make sure the plug clicks into place.
- c) Insert the jack of the adapter into the rear of the main activator unit.
- d) Connect the plug to the power socket.
- e) Press the one-touch button of the main activator unit and hold for 3 to 4 seconds until you hear a beep sound.
- f) An orange light will illuminate the one-touch button, indicating that the QB Scribe Resonator System unit has not been used before and it is ready to be used for the first time.
- g) Place the main activator unit on top of the Water Jug.
- h) Press and release the one-touch button to begin the activation. The button turns to blue blinking light indicating resonating process starts.
- i) After about 30 minutes, the light will turn green. This means that the water is now fully resonated and ready for consumption.
- j) To Shutdown the QB Scribe Resonator System, press and hold for 3 to 4 seconds. The button will turns to no light indicating the system is shutdown

NB: If the QB Scribe Resonator System is using AC power supply, automatic shut down will not happen. The system will remain "ON" with green light

The QB Scribe Resonator System can be switched off by pressing and holding the one-touch button for 3 seconds.

To restart or using the QB Scribe second time onward - Press and hold the one-touch button on the main activator unit for 3 to 4 seconds until the red light appear with a beep sound. A red light appears indicating that the QB Scribe Resonator System is on stand-by mode for the resonating process to begin.

To start the resonating process, press and release the one-touch button. A blue light will begin to blink from the button, indicating that the water is being resonated.

After about 30 minutes, the light will turn green. This means that the water is now fully resonated and ready for consumption.
